

DevOps Engineer

EASI'R is the leading cloud-based customer relations platform for the automotive industry. We work with some of the most influential automotive brands and help more than 2,600 car dealerships across Europe, to grow profitable and long lasting relationships. We are looking for DevOps Engineers in Aarhus to help us raise the bar within automotive lead management. You will join a digital-born company with the spirit and passion of a startup, and the investment eagerness of a global tech-firm.

The position

A couple of years ago, we reinvented the main product, which also started the journey towards embracing cloud and the SaaS domain. Now, we are designing for further scalability in terms of applications, microservice architecture and our AWS infrastructure setup. In addition, we have started to work on a machine learning project. To help us with all these projects we are looking for DevOps Engineers.

You will be positioned in a team that does both development and operations on our core product areas, collaborating with peers and other professional profiles across the company in order to integrate the final EASI'R product range. You will perform systems administration and deployment work - focussing on automating as much as possible. We would like you to take an active role in simplifying the overall operating environment to achieve the goal of continuous delivery. You must participate in making the organizational cultural shift to implementing and then standardizing DevOps.

You will join a team of highly skilled and passionate colleagues that value professionalism but also humour as a part of everyday work life.

Your tech profile

If you find yourself pondering whether you are a sysadmin or a coder, this is the job for you. You'll be doing both - including scripting - and you should have an overall curiousness towards learning new stuff. We wish to stay on par with the newest technologies and tools for our DevOps setup, and we need your input to select and implement these.

You probably have experience with source control, CI/CD, automation in general, containers and cloud. On our other job ad: [“Senior backend developer”](#), you’ll find these tech skills listed - so if they also make sense to you, even better.

- Modern PHP + Laravel/Symfony
- Building REST API’s
- Relational databases
- Elasticsearch
- Knowledge of SOLID principles
- Knowledge of design patterns

Other stuff we play with

- Docker
- Microservices
- Redis
- RabbitMQ
- Kafka
- Kubernetes
- Python/Go/Node.js

Personal qualities

You understand how to collaborate with people across various professional profiles. You understand culture and organisation. You are probably aware, that engineering architecture within the heart of our value stream at times requires working on several high priority tasks simultaneously.

As much as we appreciate framed diplomas, it means more to us that you are passionate, result-driven and have an eagerness to learn. In your application, tell us about your last five years and what you’ve been up to - including what drives you to continuously be on the edge of your comfort zone.

We’d really love to meet up :

- If you have a proactive mind-set and perform independently as well as in teams
- If you want to get to know new technologies and are not afraid to throw yourself head first into new adventures

- If you are a team player and have highly developed communication skills, both toward peers and customers
- If you care about outcome rather than your own spot in the value stream

What we offer

- An informal entrepreneurial start-up working environment
- A setting where you are a co-designer of our work setup, processes and tools
- The opportunity to create new services for the automotive industry
- Experience in building a modern scalable platform, continuously adapting to market needs
- Health care and pension schemes
- And of course lunch, soft drinks, fruit & coffee, and whatever else may get you rocking

Send us your application, CV and perhaps a portfolio link right away to jobs@easir.com, or contact us for more information! If you have any questions on the application process, please get in touch with our HR manager Miriam Davidsen at +45 22 17 67 71. You are also welcome to contact our:

Head of Development - Thorbjørn Munck-Alstrup, +45 24 25 31 92, tm@easir.com

Tech lead - Morten Hauberg, +45 22 43 62 34, mh@easir.com

About EASI'R

At EASI'R, we are on a mission to revolutionize the way automotive companies work with customer relations. We work with some of the world's most influential automotive brands, manufacturers, national sales companies, large dealer groups and vendors to the industry. Our customers are forward-thinkers who understand that in our ever-evolving business landscape, success isn't about closing the deal today. It's about building long lasting relationships that keep customers around for tomorrow. More at www.easir.com
